

TECHNOVA SOLUTIONS — DIGITAL PLATFORM PROPOSAL

Executive Summary

We propose a scalable cloud-native customer platform using REST APIs, microservices, managed database services and automated CI/CD.

Technical Capability

Architecture uses API gateway, containerized services, PostgreSQL, Redis caching and cloud object storage. The design supports horizontal scaling and third-party integrations.

Implementation Plan

A 16-week Agile delivery is divided into discovery, architecture, two-week sprints, UAT and production rollout. Weekly governance and milestone reviews are included.

Commercial Value

Fixed implementation fee: \$180,000. Transparent milestone billing and an estimated 22% reduction in operational cost after year one.

Security & Compliance

TLS encryption, encryption at rest, IAM least privilege, audit logging, vulnerability scanning, backup and disaster recovery are included. ISO 27001-aligned controls are proposed.

Support & Experience

Team has 9 years of enterprise delivery experience. 24x7 P1 support, 99.9% uptime target and named service manager are included.
